Attacked scenarios only (strength > 0)
(a) Raw model prediction: held-out n=13
Equal predicted and realized cost
Estimated extra cost ($)
Realized paired extra cost ($)
SoC deficit at detection (kWh)
(b) Same held-out cohort; no test-set fitting
Counterfactual cost (n=13)
SoC deficit: OLS (n=13)
Current-price estimate (n=13)
Mean-forecast-price estimate (n=13)
Mean absolute prediction error ($)
